VIDEOWALLS IN A MONUMENTAL SETTING

Inquiry

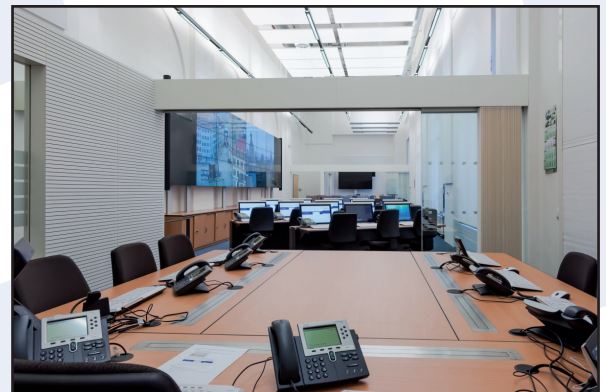

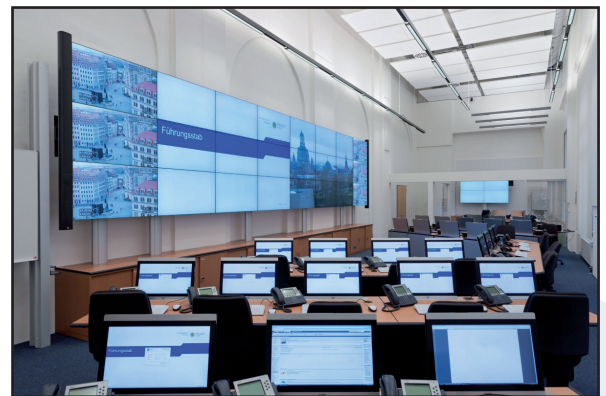

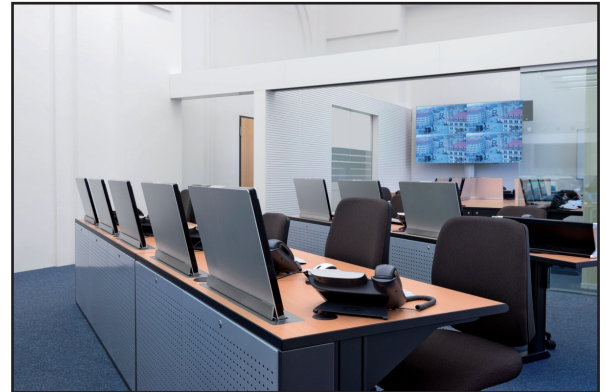

Request:

The police headquarters in Dresden has recently been fully equipped with modern facilities due to which also the central control room and command center have been completely redecorated. After design and supervision of engineering agency Steffen Dreßler from Dresden, these rooms are now equipped with the latest audiovisual technologies. For displaying images also a number of VideoWalls have been integrated. In the old historical building, the walls however proved insufficiently strong to bear these VideoWalls. In the control centre that among other things is used in the coordination of large-scale operations a VideoWall of 24 monitors with a diagonal of 55 inches is installed in a 8x3 configuration. In addition, on both sides of the command center two separable conference rooms are situated both of which, among other things, are equipped with a 2x2 VideoWall.

In the control room workstations for the 112 central, the duty officer and a workplace for supervision and coordination are located. In this room a 3x3 VideoWall is placed and between the pillars of the building several separate monitors are mounted on an aluminum tubular system.

Solution:

Based on the desired composition and functionality, we have delivered several custom mounting systems, all based on our standard solutions. In this case it concerned the floor to ceiling and floor to wall solutions with an appropriate height and customized horizontal profiles. All VideoWalls feature our "Push-to-Open" mounting system so that in case of failure, the cabling is quickly accessible and if necessary, the monitor can be quickly exchanged. Continuity and the possibility of quick service was of great importance. The speakers mentioned in the specification mounted to the VideoWall system with customized brackets to the video wall design confirmed. Prior to delivery, we provided the consultant with detailed drawings by position and/or room. Upon delivery of these arrangements these are packed as a kit with numbered parts per assembly system and per room. The executive system integrator therefore could quickly and perfectly install the appropriate solutions. This system integrator had no experience with the SmartMetals Video Wall mounting system but in the meantime we have received several follow-up orders for similar systems. Even after the project in Dresden several police stations in Germany have been equipped with mounting systems supplied by SmartMetals.

Concept:

By choosing for a SmartMetals mounting solution and the design and supervision of engineering agency Steffen Dreßler, the police headquarters in Dresden has been fully equipped with modern facilities despite the constraints of the monumental building.
